DARAMIO

Modern LED-Lit Mirrors for Every Interior.

Touch
Light Switch

User Manual / Installation

Touch
Light Switch

TECHNICAL CHARACTERISTICS

· The touch light switch activates the mirror lighting. The switch is backlit with cool white and has functions for turning on, off, and changing the intensity of the lighting. (The touch switch is positioned according to the selected option in the configurator: at the bottom center of the mirror, on the right at mid-height, or on the left at mid-height.)

· In the case of a combination of the button and dual lighting (CCT), holding down the switch first changes the color temperature and then the light intensity. A short pause (less than 5 seconds) is required between individual settings. If the pause is longer than 5 seconds, the setting returns to the originally adjusted parameter.

After being switched off and on again, the mirror remembers the last selected setting.

LIGHTING CONTROL

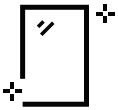
1. When the mirror is connected to electricity, the touch switch will light up in white.

2. A short press/touch of the button turns on the LED lighting of the mirror.

3. The light intensity can be adjusted by holding the touch switch until the desired level is reached.

To change the temperature (when dual LED is selected), after a short pause following the intensity adjustment (less than 5 seconds), press and hold the touch button again – the light temperature will change.

4. To turn off the LED mirror lighting, briefly press the touch switch.



Thank you for choosing our product.
